Open Outdoors for Kids Learning Exchange

Session 1

September 2nd, 2021

National Park Foundation Open Outdoors for Kids Hybrid Learning

“Make it, break it, fix it”

Marc Stern- Virginia Tech

Bob Powell- Clemson

Troy Frensley- UNCW

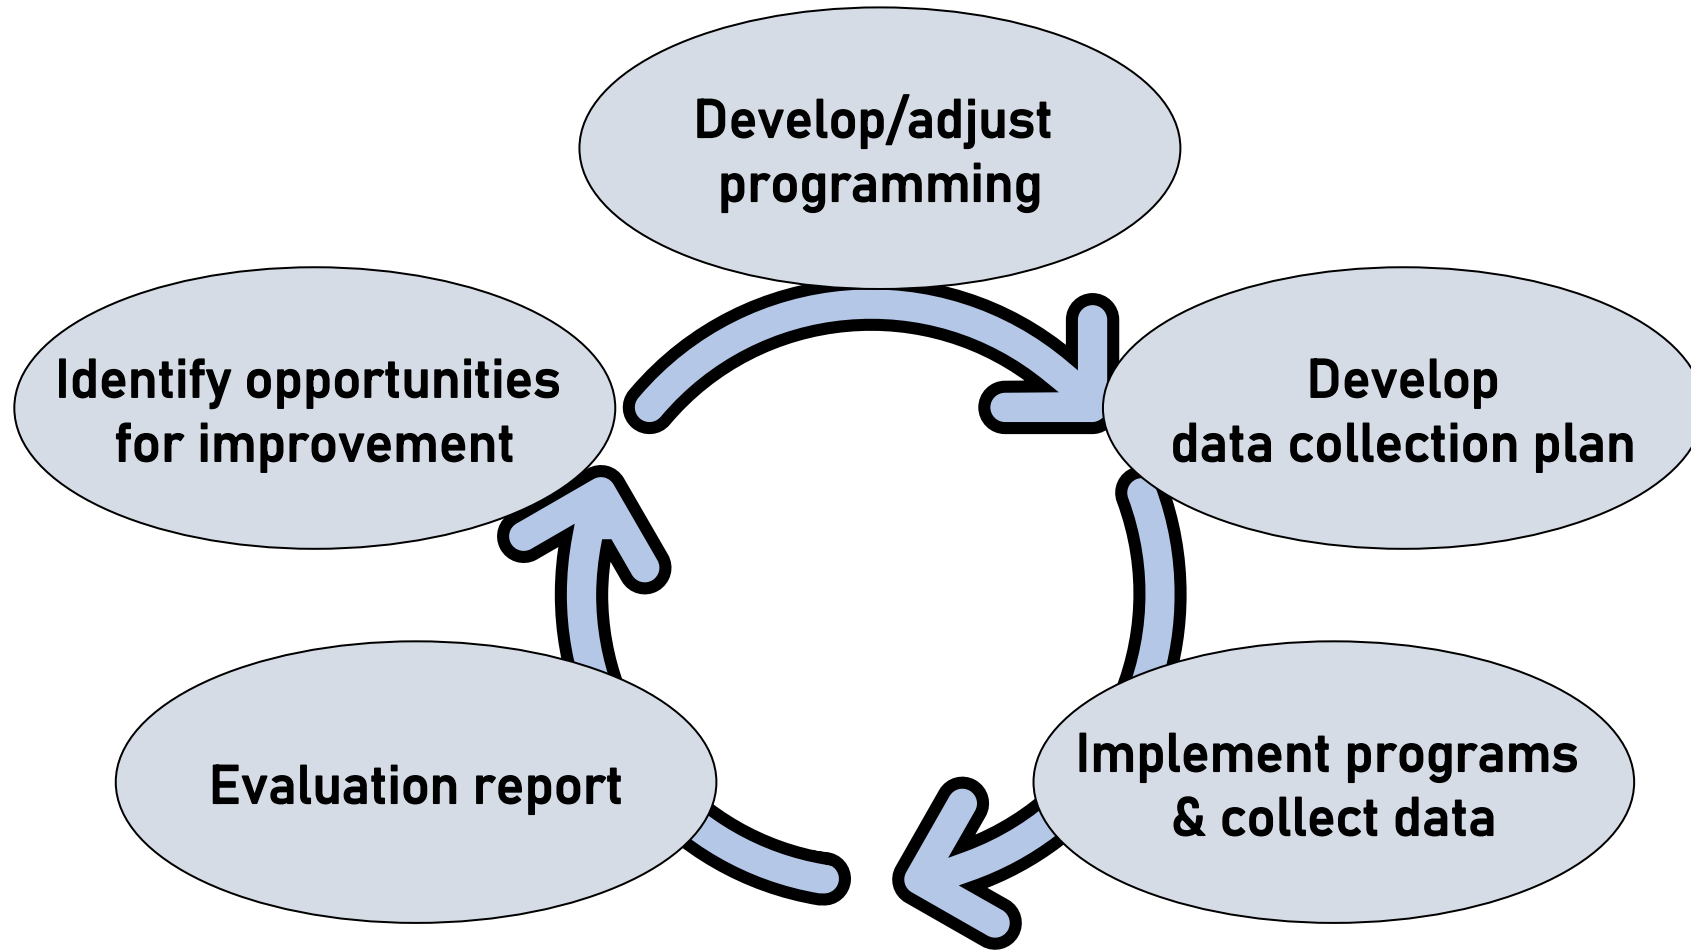

Kelley Anderson- Virginia Tech

Goals of the Learning Network

- Learn and exchange ideas with colleagues
- Use evaluation results and research to inform programmatic improvement
- Increase evaluation capacity and promote adaptive management

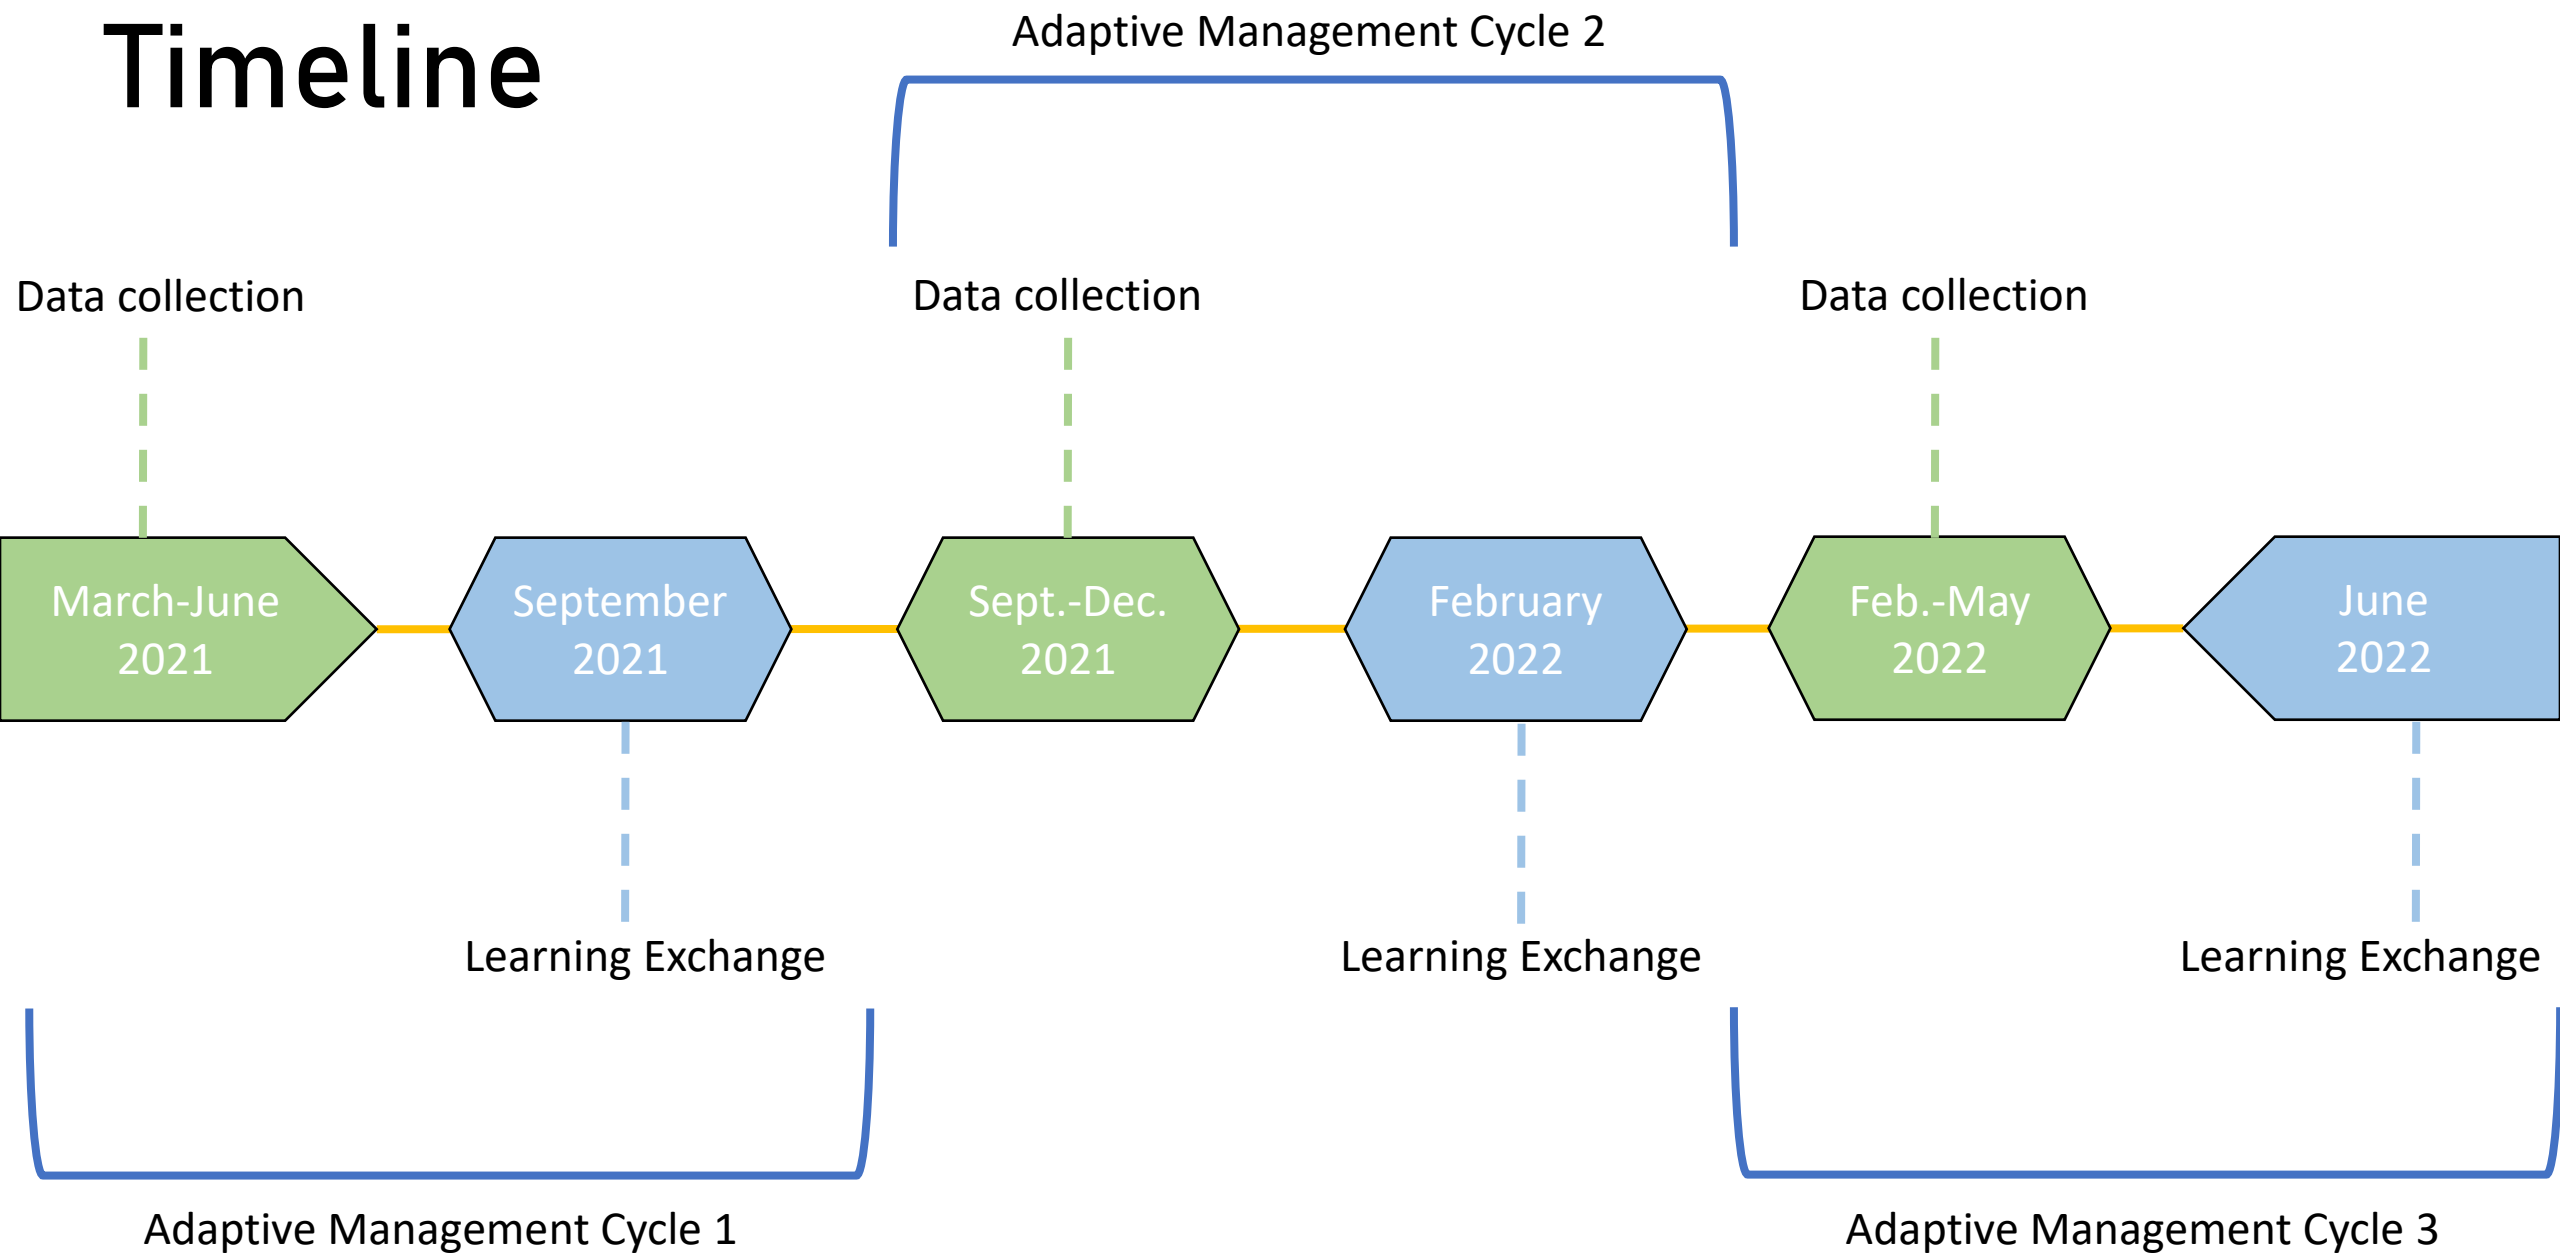

Adaptive Management

Enjoyment
Interest in the National Parks
Interest in learning
Personal meaning & relevance
Stewardship
Critical thinking
Social-emotional learning
Place connection
Inclusivity

Timeline

Why is this unique?

The Tale of Two Evaluations

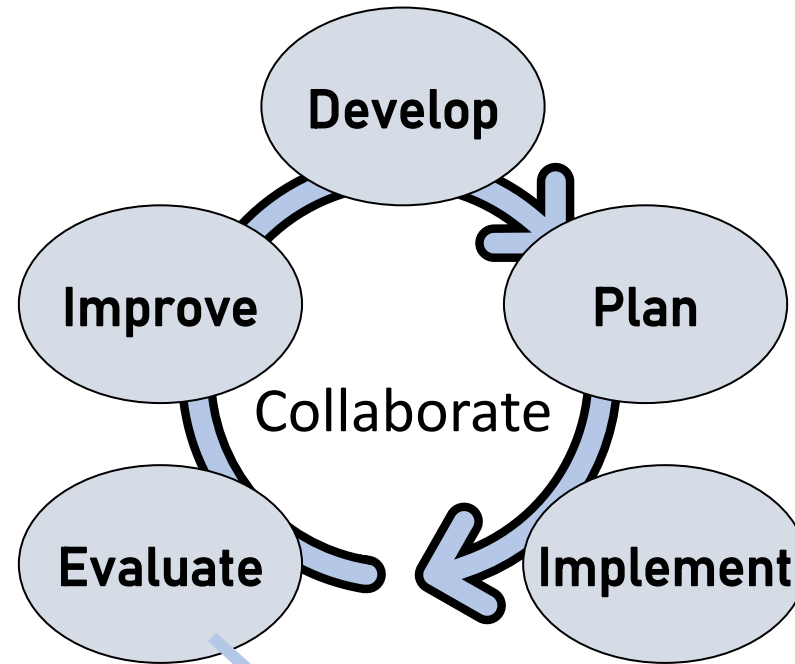

What is learned?

Why is this unique?

The Tale of Two Evaluations

Join us in a learning and evaluation process!

All data reports are confidential!

ACCOUNTABILITY

LEARNING

Join us in a
learning and
evaluation
process!

All data reports
are confidential!

What are we learning?

How can we make our programs the best that they can be?

- Program strengths and weaknesses from the evaluation report.
- Research-based promising practices.
- Learn from each other about what works on the ground.

What does evaluation entail and how can I help evaluate our programs in the future?

- What does the evaluation process look like?
- How can we collect valid data that can be used?
- How do we interpret evaluation reports?
- How can we use evaluation reports to improve our programs?

What do we need from you?

1. Willingness to engage with other Parks and share ideas.
2. A commitment to collect survey data from your participants.
3. Report on your programs and activities in the Activity and Participant Tracking Sheet.
4. A commitment to try new things in your programming and keep track of what changes are made.

National Park Foundation Open Outdoors for Kids Program

WONDERFUL NATIONAL PARK

Spring 2021 Data Report

Report Summary

Thank you for your participation in this network and your hard work collecting these data. This confidential report shares the evaluation results of your Spring 2021 OOK program: *The Wonders of Nature*. We provide an overview of your survey responses and a comparison of your program outcome scores to the network average. See [Appendix A](#) for a full description of the survey items, [Appendix B](#) for student open-ended feedback, and [Appendix C](#) for tips on increasing your survey response rate.

Overall, your program had [moderate to high positive scores](#) for most student outcomes, with highest scores in [place connection and inclusivity](#). Use this report to help you reflect on your Spring 2021 program strengths and to identify areas for improvement.

Response Rate

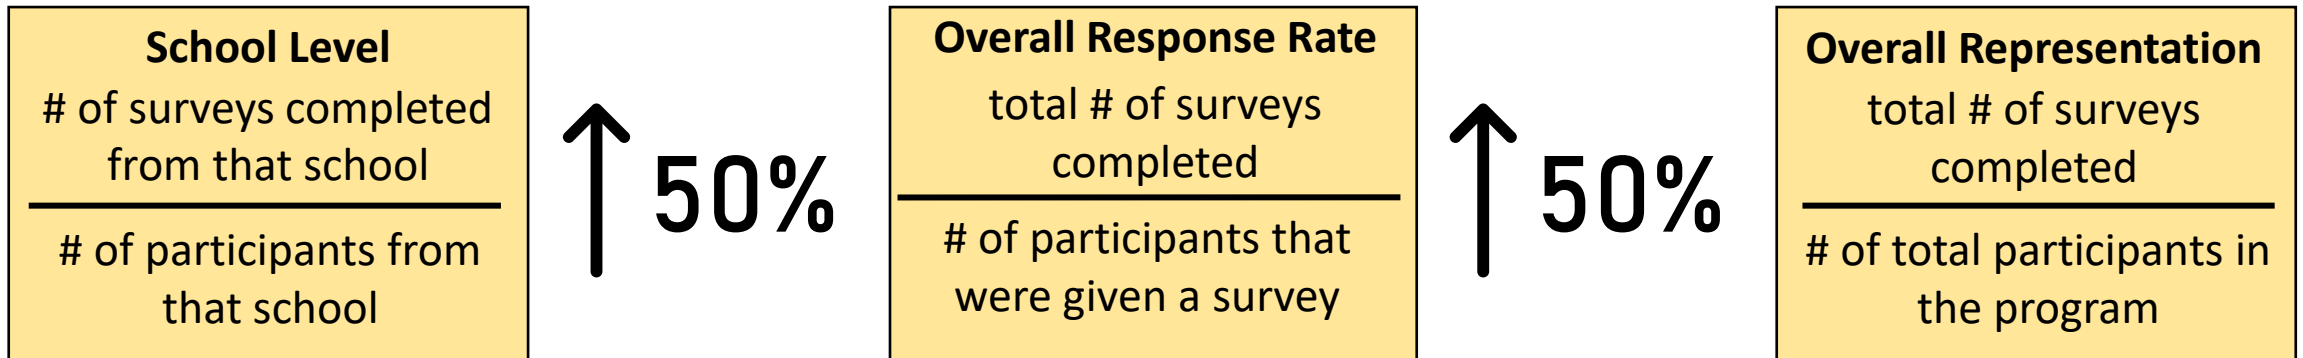

The survey response rate helps to determine how representative the sample of survey respondents are compared to all program participants. If less than 50% of program participants take the survey, this is not likely a representative sample, meaning the data may be biased or inaccurate. The easiest way to obtain a representative sample is to survey all program participants (also known as taking a census).

See Appendix C for tips on increasing your response rate.

The Wonders of Nature

Data were collected from four of five schools that participated in this program. School A had 27 responses (87% response rate), School B had 92 responses (64% response rate), School C had 41 responses (12% response rate), and School D had 52 responses (93% response rate). No data were collected from School E. In total, you received 212 survey responses out of 573 students administered a survey, equaling a 37% response rate, representing 34% of all program participants.

School Level

12% - 93%

Overall Response Rate

37%

Overall Representation

34%

Limitations

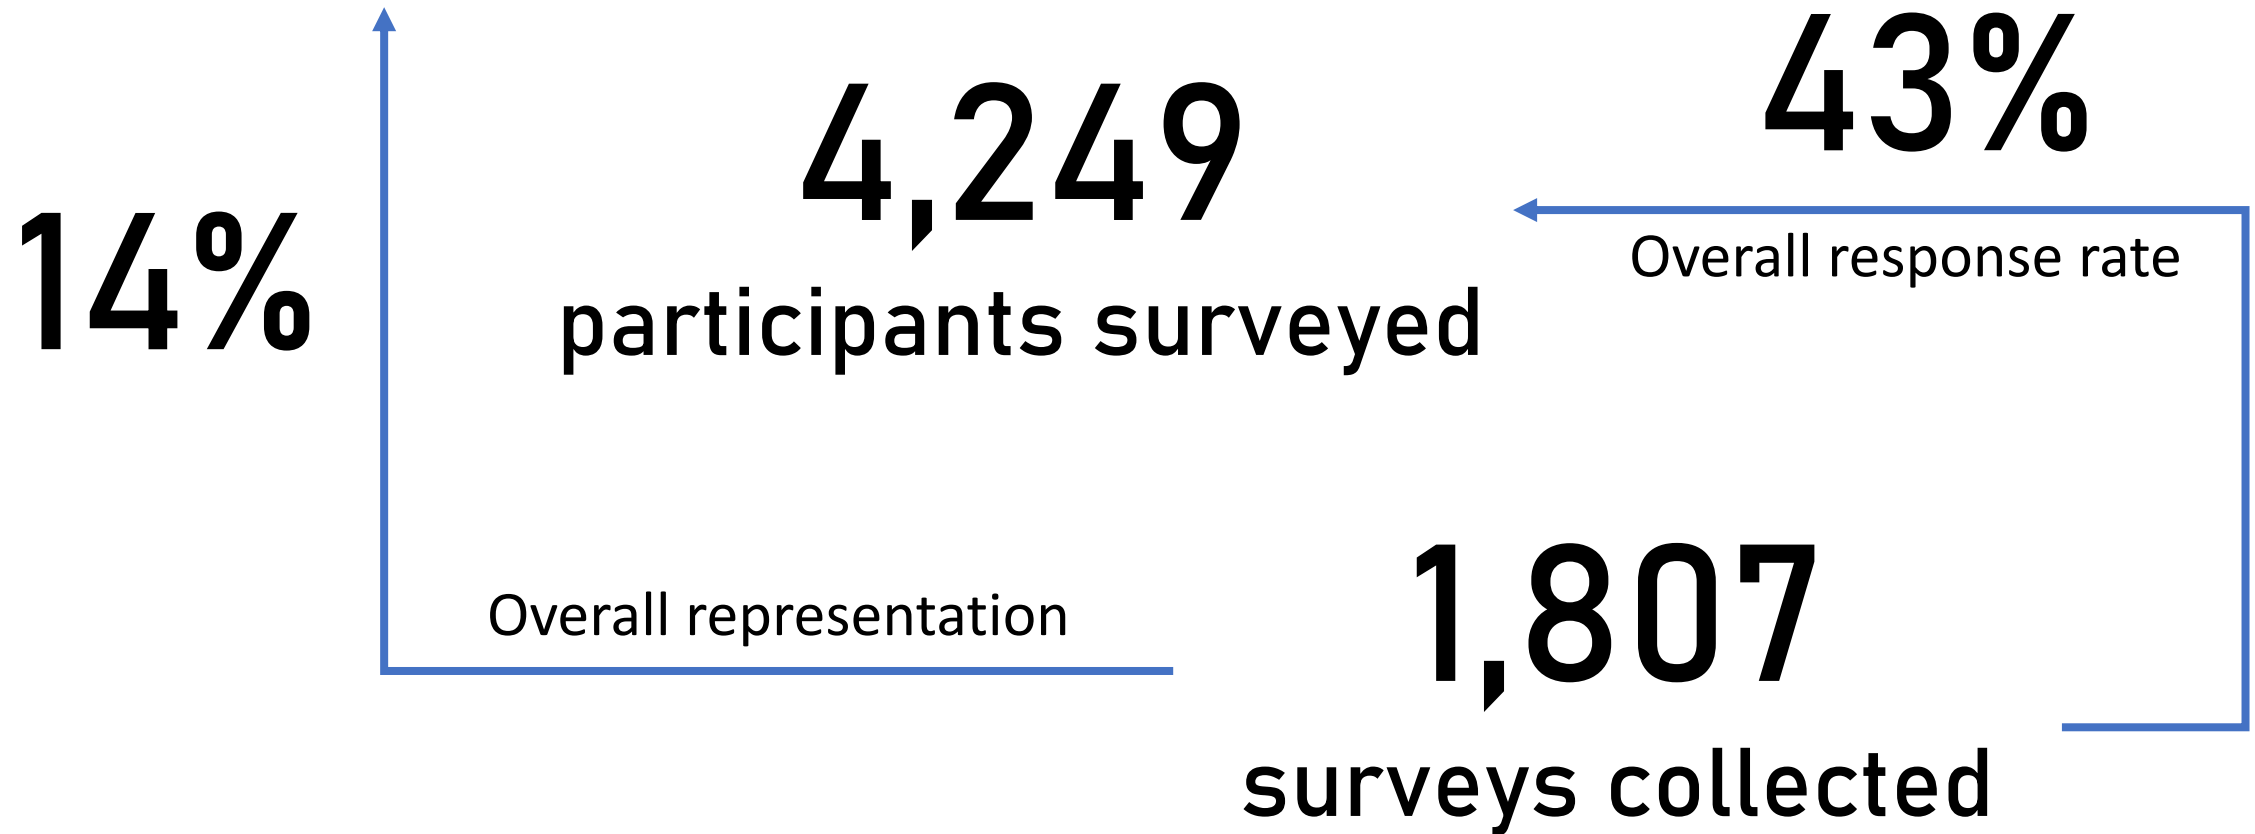

The data shared below only includes school groups that had at least a 50% response rate. That includes School A, School B, and School D for a total of 171 survey responses (27% of all program participants). With an overall response rate of less than 50%, these data are not likely representative of your program as a whole, but do reflect the experiences of students from School A, B, and D. Consider how the schools included in these data are similar or different to School C and E and how that may have impacted the results.

Schools A, B, and D only.
NOT representative of the program as a whole.

12,657
participants in
programs evaluated

13 parks collected valid data

Tips for increasing survey response rate

1. Survey all participants.
2. Show enthusiasm when talking to teachers about the survey.
3. Send the survey and introduction video links to the teacher well in advance.
4. Don't rely on teachers to administer the survey.
5. Use the last 10 minutes of your program time to administer the survey.

What if I don't have time to administer the survey to my participants??

6.6 minutes

average time it takes students to complete the survey

Demographics

All 171 survey respondents were in the 5th grade. In total, 49% of respondents identified as female (Figure 1) with no clear racial majority (Figure 2).

Figure 1. Gender of survey respondents

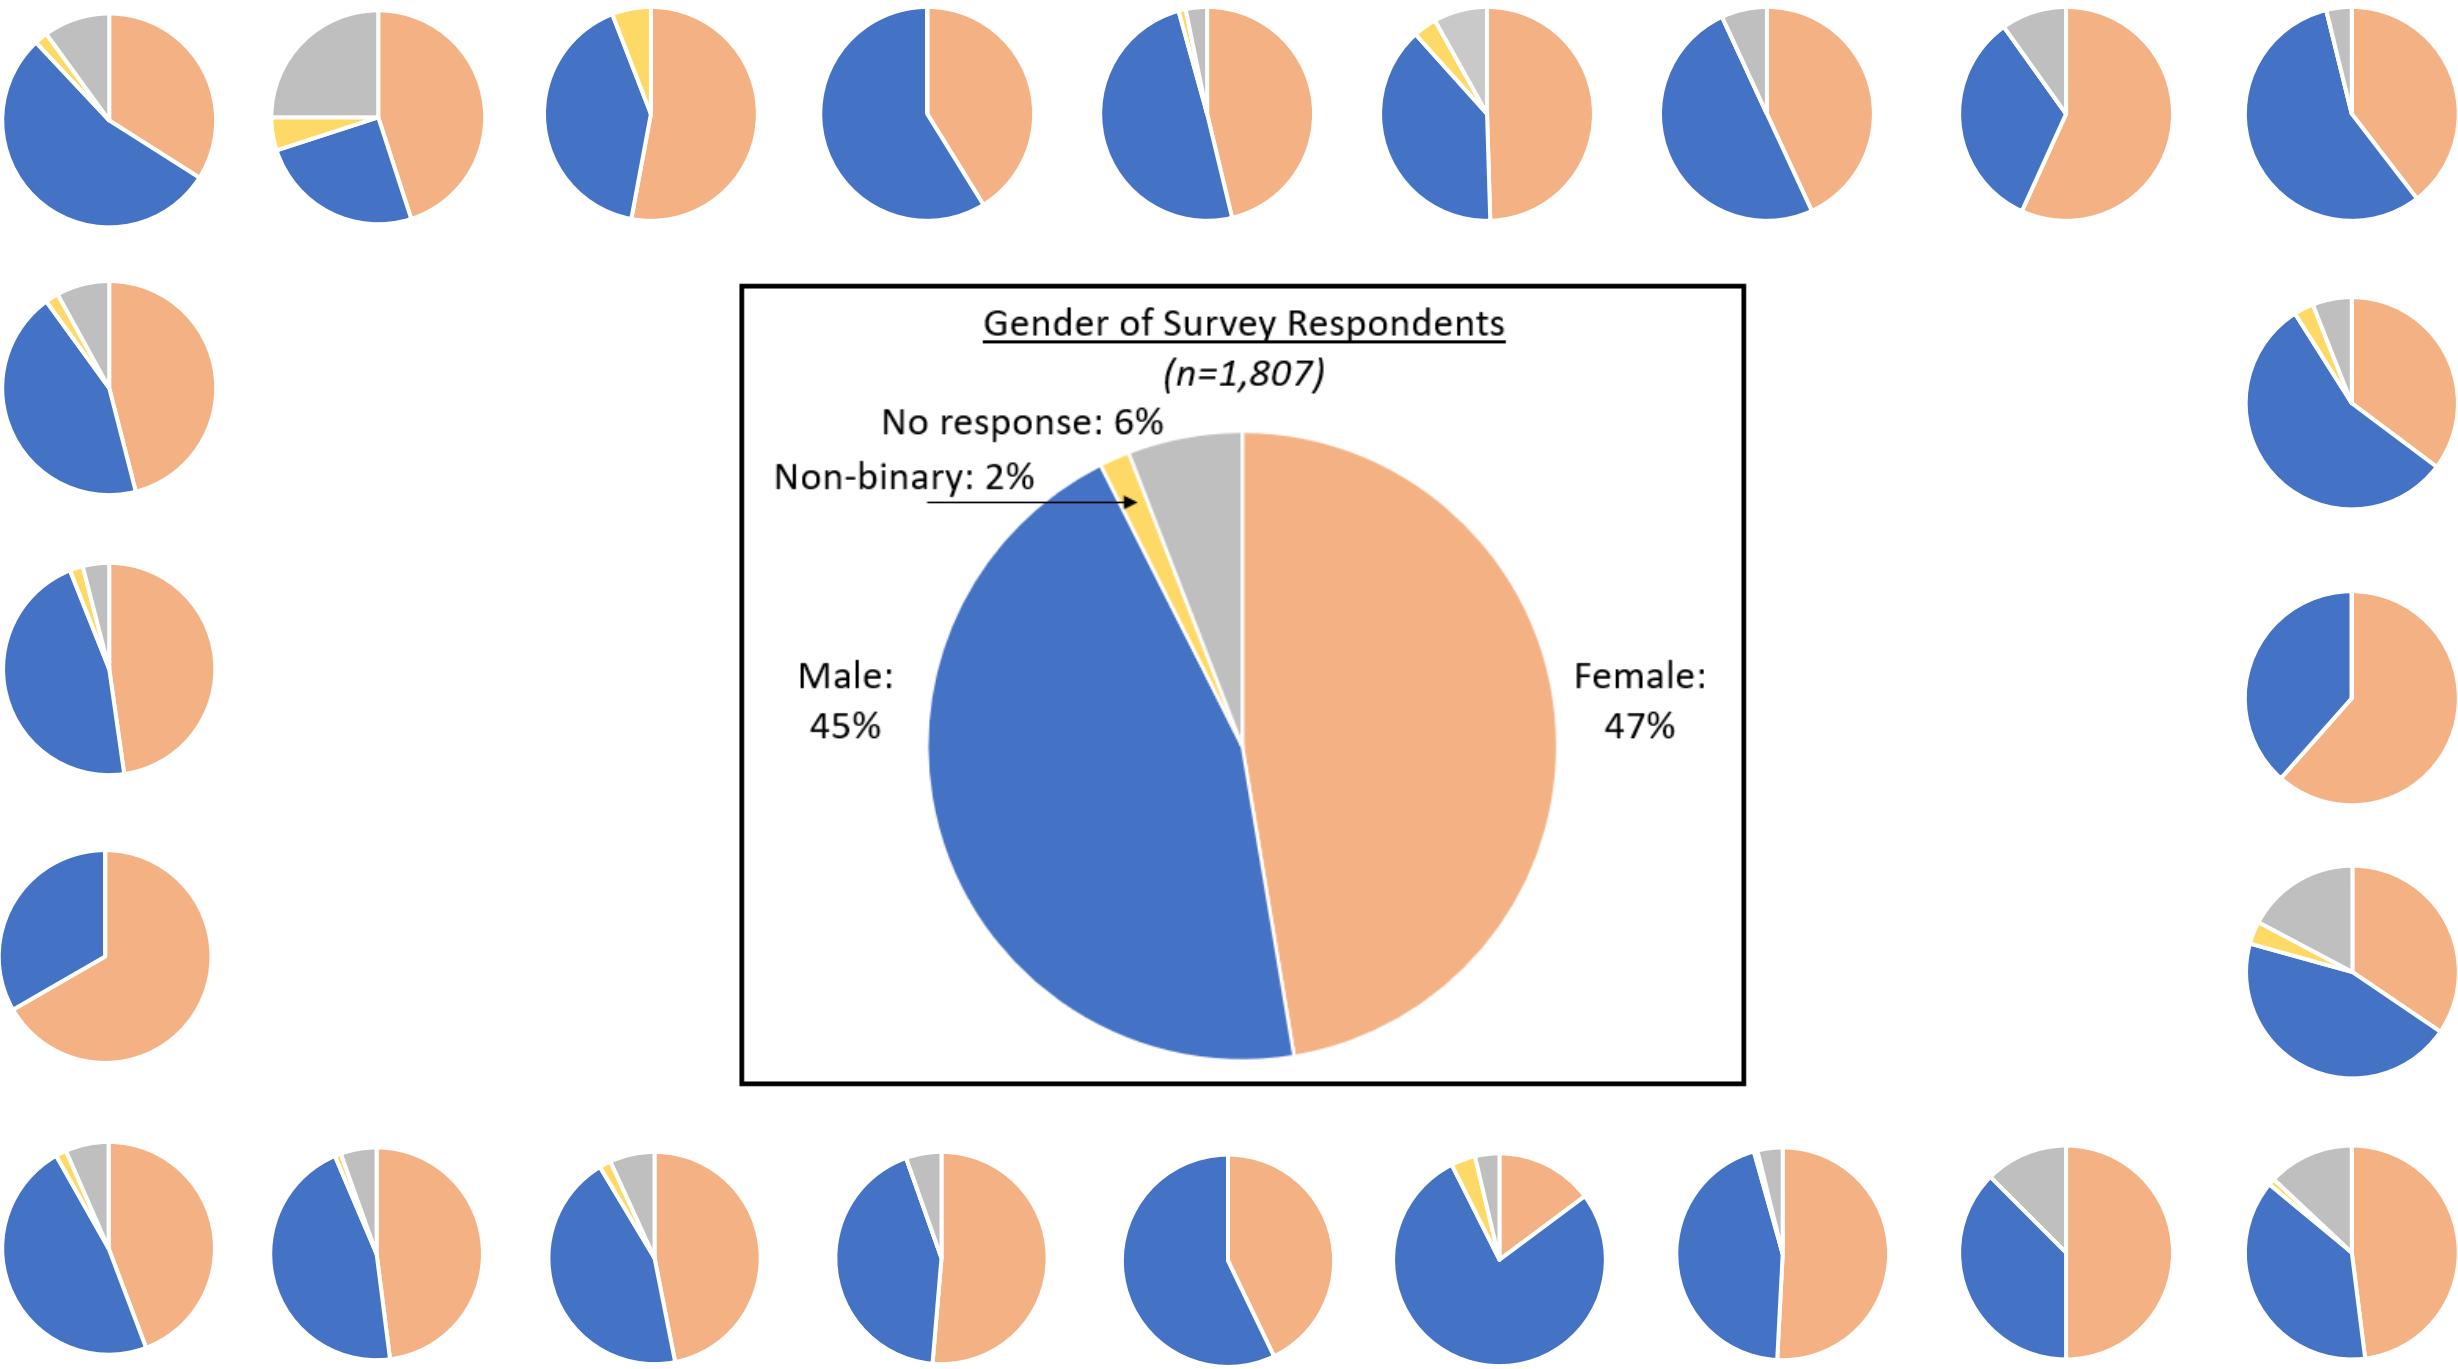

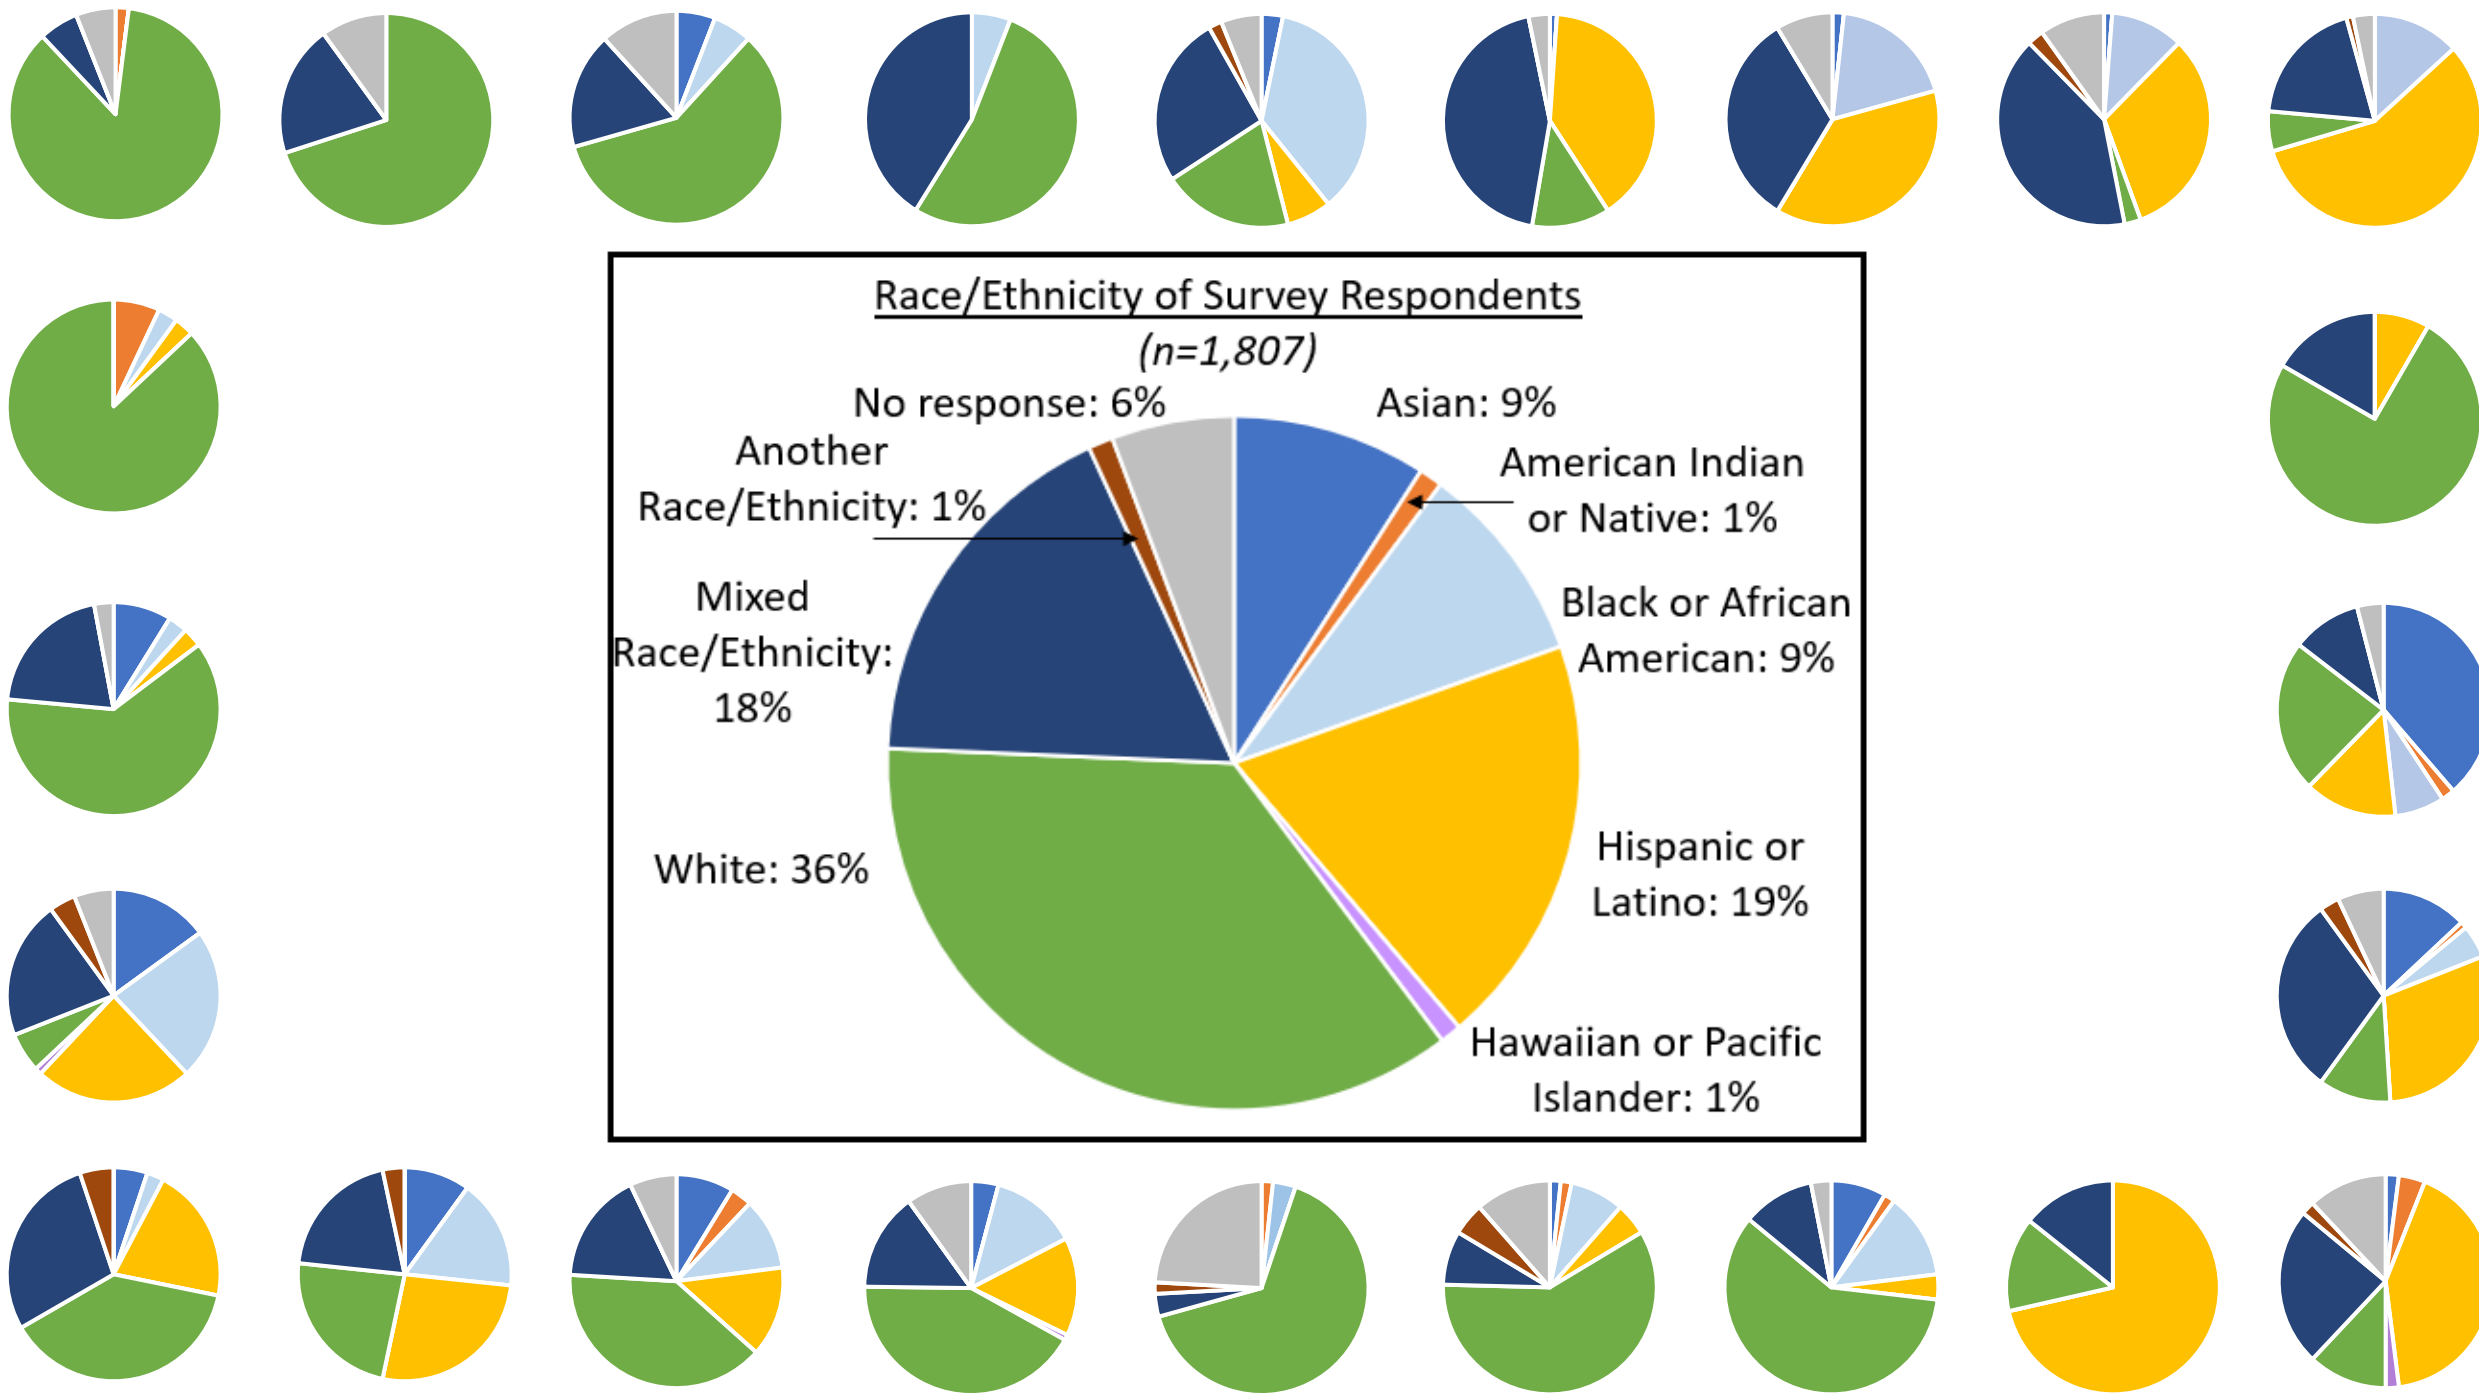

Figure 2. Race/ethnicity of survey respondents

Network Average

The network averages shared below represent the average outcomes score for eight other Parks that ran environmental programs for 5th grade and up (~1,130 students). The network average does not include your Park's programs. Numbers with an asterisk represent outcomes in which your program score was significantly higher or lower than the network average. Cells colored in red indicate a significantly lower score than the network average and cells in green indicate a significantly higher score than the network average.

How should I interpret these scores?

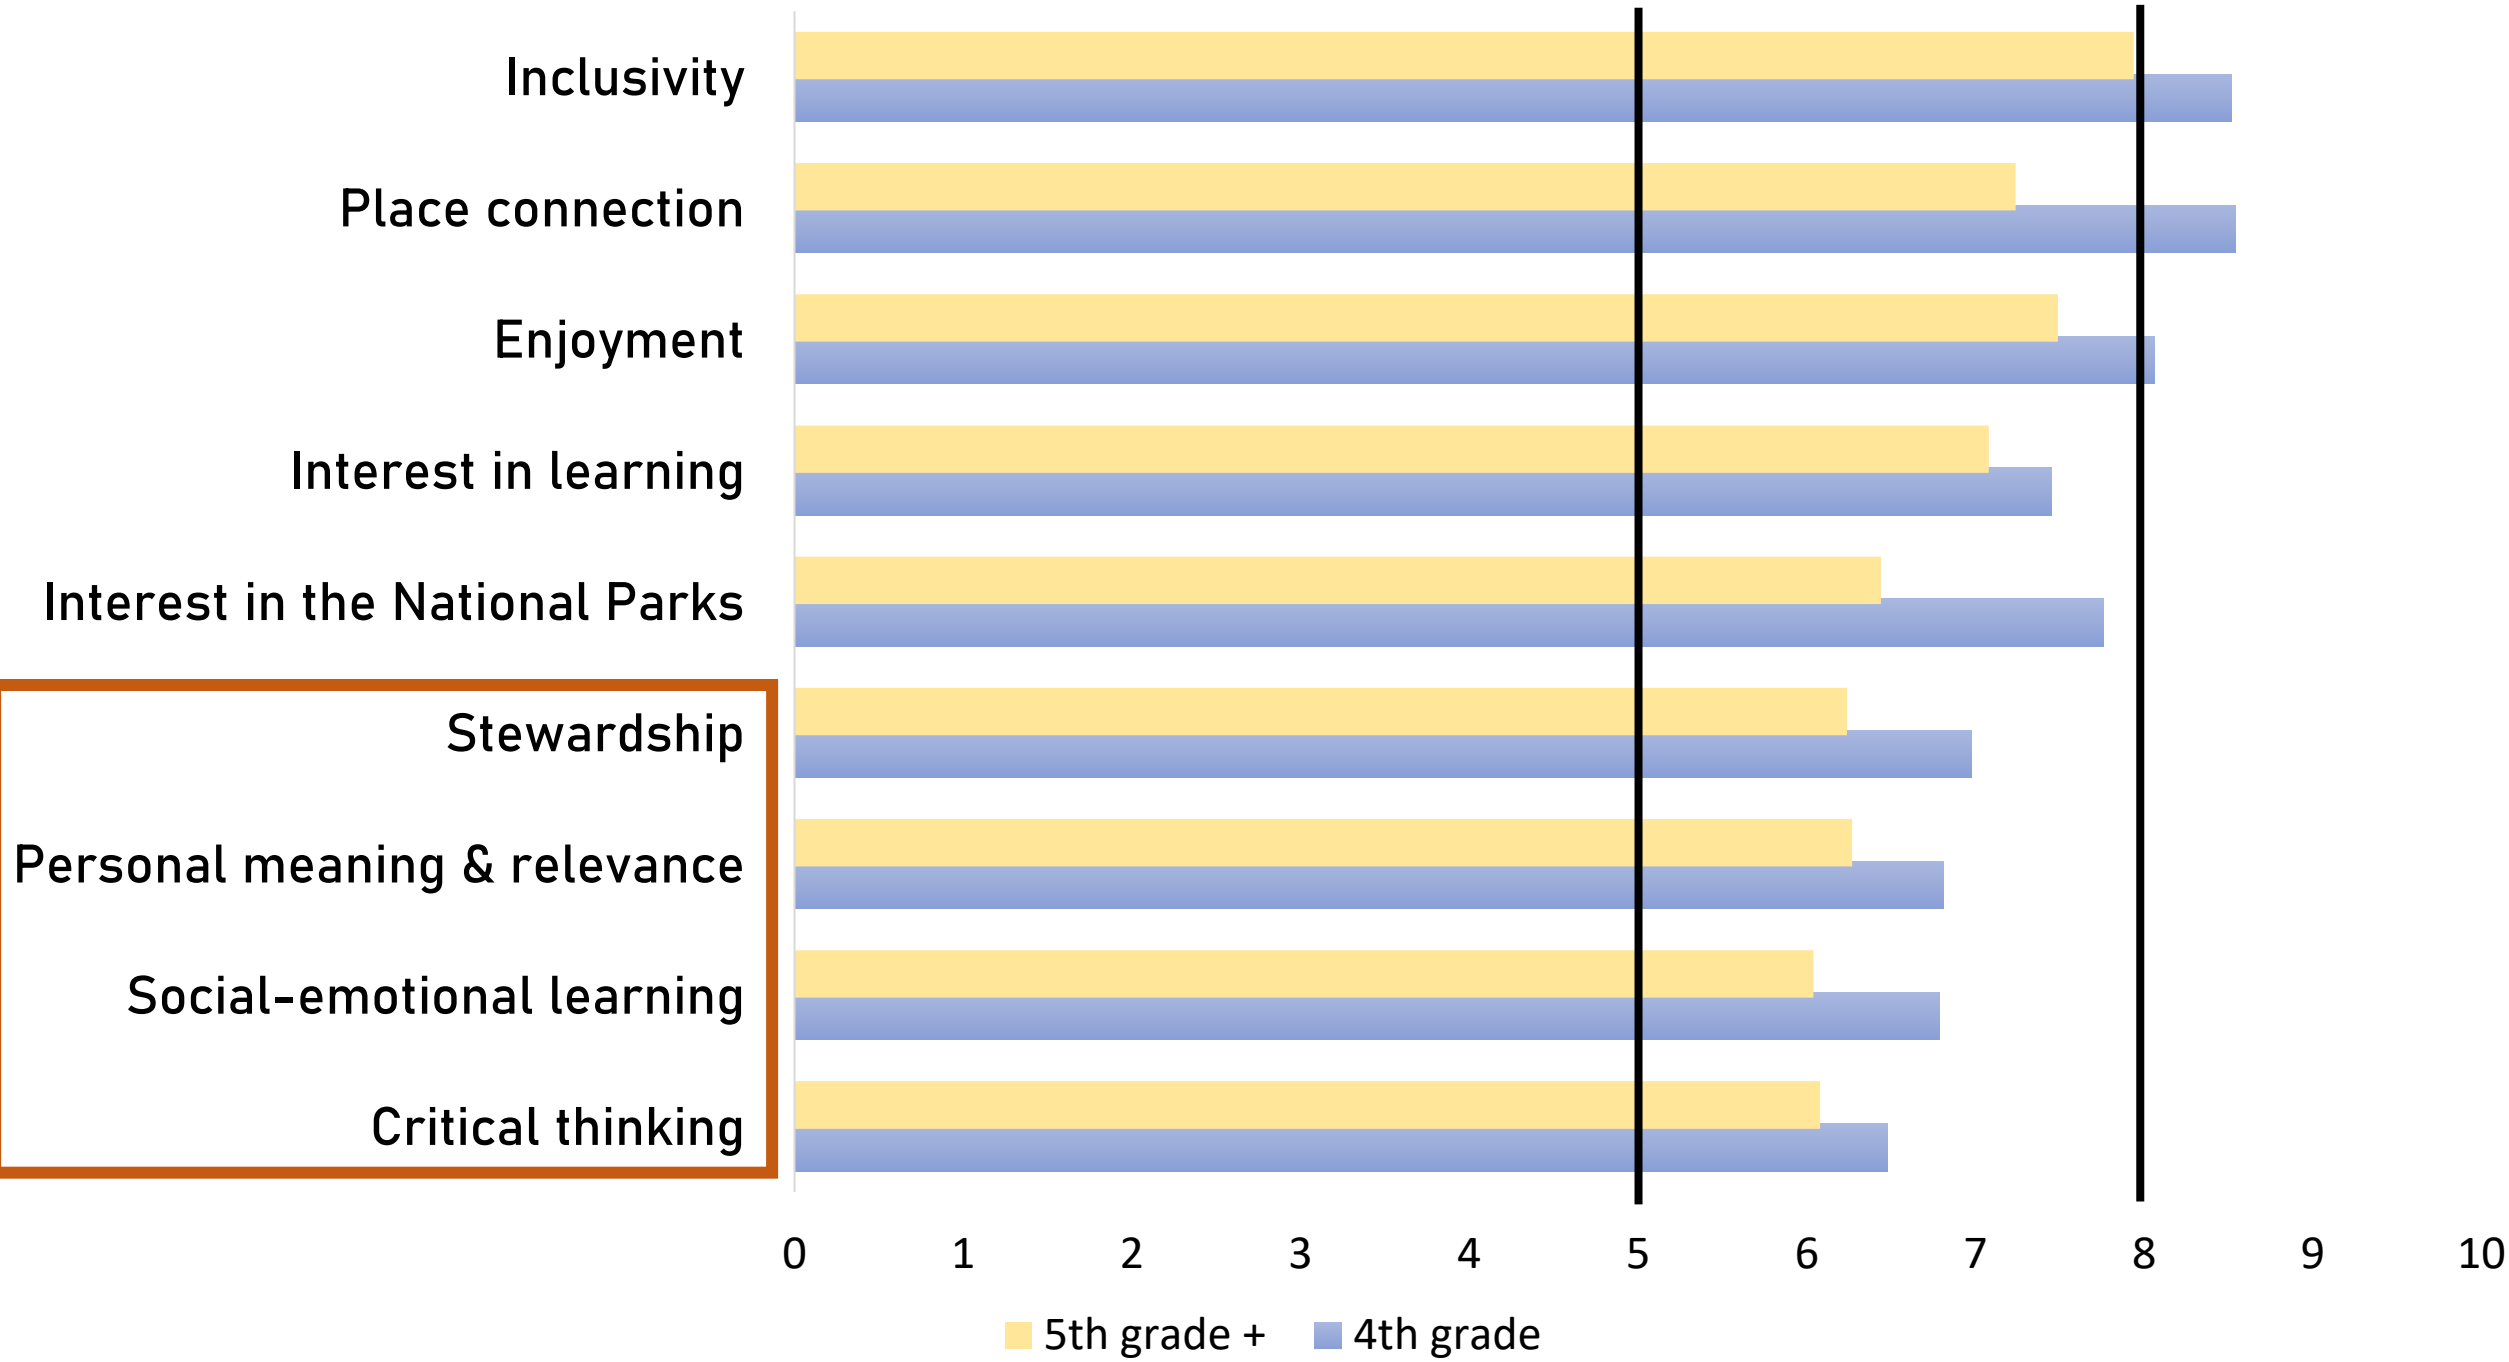

Any number above 0 represents a positive change

> 5 represents a moderate positive change

> 8 represents a large positive change

Table 2. Program outcome scores and network average

Outcome	Your program	Network Average 5th grade +
Enjoyment	8.01	7.52
Interest in the National Parks	8.11*	6.54
Interest in learning	6.71	7.20
Personal meaning & relevance	5.79	6.31
Stewardship	6.87	6.36
Critical thinking	5.88	6.21
Social-emotional learning	4.57*	6.14
Place connection	9.05*	7.34
Inclusivity	8.25	8.02

Adaptive Management Action Plan

- Reflecting on what you've learned from your participation in this network, how might you revise or rethink your programs to improve outcomes? *Refer to the research-based promising practices we've discussed.*
- How and when will you implement these practices and what resources do you need? (i.e., training educator staff, curriculum changes, use of new technology, etc.)
