THE 1977 VIRGINIA OUTDOOR RECREATION DEMAND SURVEY

by

Joseph W. Roggenbuck¹

INTRODUCTION

Knowledge of the present and projected public demand for outdoor recreation is a key element in the planning of a comprehensive system of outdoor recreation opportunities throughout Virginia. Public preferences for outdoor recreation experiences have changed dramatically in recent years, and formal measures of demand at any point in time remain only approximate. Nevertheless, demand analyses that are based upon the premise of satisfying public needs--as the public defines them--have a solid basis in the traditions and policies of governmental service agencies, and do provide a general guide for the planning, acquisition, and development of outdoor recreation lands and facilities.

This outdoor recreation demand booklet, published by the School of Forestry and Wildlife Resources, Virginia Polytechnic Institute and State University, in cooperation with the Virginia Commission of Outdoor Recreation, has three general purposes. The first is to provide federal, state and local agencies and organizations with responsibilities for the provision of outdoor recreation services with guidelines on current and projected demand for recreation activities by state, region, and locality. The second is to make the demand estimates easily available to agencies

¹Joseph W. Roggenbuck is Assistant Professor of Forestry, Virginia Polytechnic Institute and State University, Blacksburg, VA 24061. This booklet was prepared in cooperation with the Virginia Commission of Outdoor Recreation.

and organizations whose responsibilities do not include outdoor recreation but whose activities may impinge upon that system. Finally, the data contained here should be useful in various research activities, special studies, and teaching regarding the Virginia outdoor recreation system.

Survey Methodology

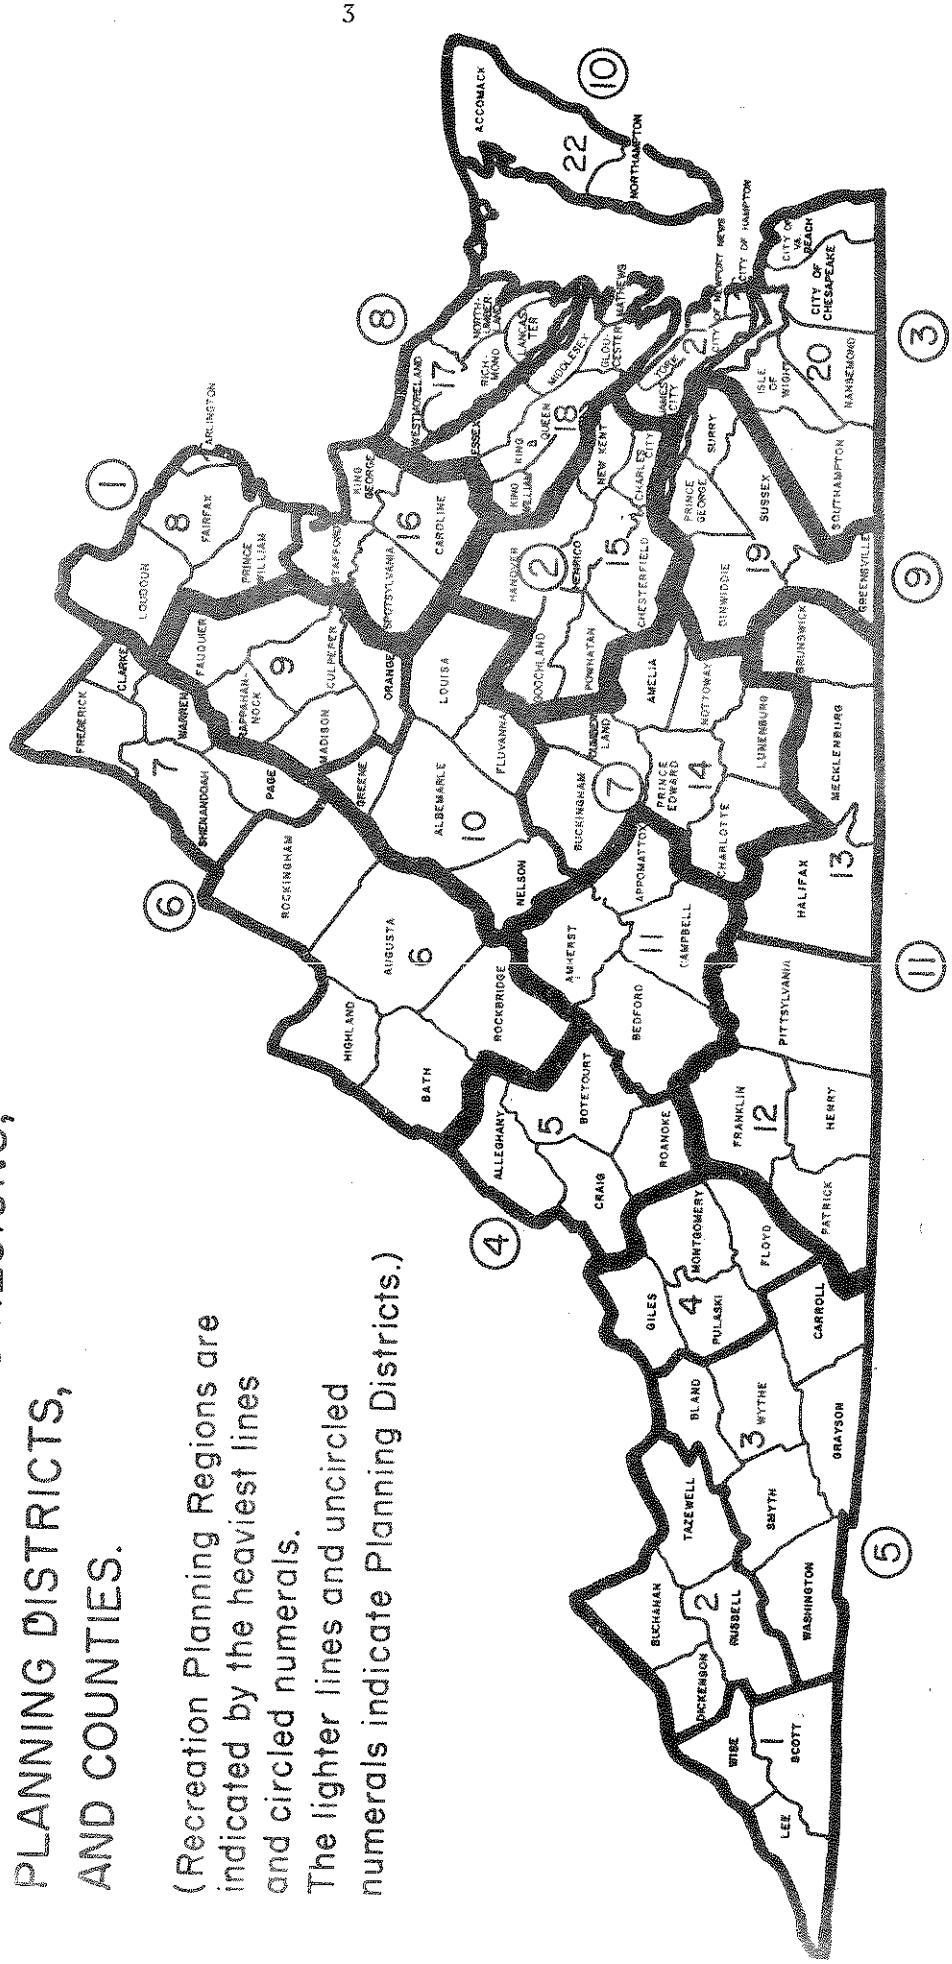

The demand data reported here have their basis in personal interviews conducted during 1972 in 1,304 Virginia households representing nearly 4,000 persons.² The interview sample was chosen from 11 contiguous multicounty areas which comprise the state's recreation planning regions (see Figure 1). Additional sampling was conducted in four urban areas. The prime objective of the survey was to determine the frequency of participation in a wide range of outdoor recreation activities. Consequently, an a priori decision to conduct a minimum of 100 surveys in each of the 11 planning regions was agreed upon. Even though each of the urban areas was obviously located within the state's recreation planning regions, it was necessary to conduct an additional 204 surveys in these four population centers in order that each of them would be represented by 100 surveys.

The questionnaire that was used in the survey was designed to provide basic information on past participation in outdoor recreational activities by all members of the households five years old and older. The number of activities included in the questionnaire was determined by the Commission of Outdoor Recreation and closely follows those same activities that are covered in the inventory of existing supply of recreational

²The 1972 demand study was completed by Spindletop Research, Inc.

RECREATION PLANNING REGIONS, PLANNING DISTRICTS, AND COUNTIES.

(Recreation Planning Regions are indicated by the heaviest lines and circled numerals. The lighter lines and uncircled numerals indicate Planning Districts.)

facilities. It was imperative that the demand element and inventory element be closely coordinated, since the basic purpose of both of these elements was to determine recreational land and facility needs. The questionnaire was also designed to provide other information such as: participation relative to the seasons of the year and the days of the week, recreation by Virginians in other states, user attitudes concerning existing recreation facilities, and general household information.

Analysis Methodology

The term "demand" as used in this report is defined as the estimated participation of people in various outdoor recreation activities. The demands are developed through the use of participation rates and population data. Demand is quoted first of all in terms of activity days of participation. An "activity day" is defined as the participation of one person, five years or older, in any activity during any part of one day. Three geographic levels of demand are calculated: (1) statewide; (2) 11 recreation planning regions; and (3) localities (counties and large urban areas). The above calculations were made for the base year 1977 and for the projection years 1990 and 2000. The following steps were necessary to complete the above calculations:

1. Establish the base year per capita participation rates and estimate annual demand in activity days.
2. Establish annual per capita participation rates and estimate annual demand for projection years.
3. Establish seasonal and average seasonal weekend day (design day) factors and estimate average seasonal weekend day demand for base year and projection years.

4. Establish planning guidelines and estimate units and facilities needed to meet estimated demand for base year and projection years.

Base Year Participation Rates
and Estimated Annual Demand

The participation rates which are the foundation of the demand estimates reported here were determined from the 1972 survey of Virginia residents. The rates were calculated by dividing the total number of persons in the sample into the number of days of participation by the sample as a whole in each activity. Data were also broken down by region, and participation rates were calculated for each. Once the participation rates were calculated, they were multiplied by the 1972 population estimate for persons five years or older, for each region, to develop 1972 annual activity day demand. The 1977 annual activity day demand was calculated in the same way, except that the 1977 estimated population was substituted for the 1972 data. Table 1 presents the population used for estimating the demand for 1977 and for projection years. Table 2 contains the 1977 annual statewide demand for selected outdoor recreation activities in activity days.

Projection Years Participation Rates
and Estimated Annual Demand

In the 1972 demand survey, projection years participation rates were determined by multiplying the base year (1972) rates by expansion factors for each activity. These were derived from expansion factors developed by the Outdoor Recreation Resources Review Commission, representing the composite effect of expected changes in six socio-economic variables--income, education, occupation, place of residence, age.sex, and leisure

24. Snow Skiing	279	00.1	0.06
Virginia Totals	406,892	100.0	87.74

time. Annual demand in activity days was calculated by multiplying the projected participation rates by the projected population size. This survey utilizes the same anticipated participation rates for its projection years, but uses a current, revised-downward population projection estimate. Thus, this booklet provides lower and more real estimates of projected annual activity day demand. Table 3 contains 1990 demand estimates for selected outdoor recreation activities in activity days and percent change from 1977 demand.

Seasonal and Average Seasonal Weekend Day
(Design Day) Factors and Estimated Design Day Demand,
Base Year and Projection Year

The seasonal and design day factors were developed from questions on the 1972 participation survey. Questions were asked of the respondents relative to their percent of the annual participation occurring in various seasons of the year and on certain days of the week. These questions were summarized, using the statewide sample as a base, and the average percent of participation in each season and for weekdays, Saturdays and Sundays for each activity was computed. After reviewing the results of these computations, the season and the day of the week with the highest average percent of participation were selected as the prime season and the design day, respectively. The prime season percentage was then divided by 13 weeks (number of weeks in each season of the year) to determine the percent of participation in an average week of the prime season. The percent of participation in an average week of the prime season was then multiplied by the peak day percentages to determine the percent of annual participation that occurs on a design day. The

STATE TOTALS		406,892	594,472	+46

percentage of annual activity days that occur on a design day for each activity was applied to the demand for annual activity days for each region and for the base year and the projection years to determine the activity days of participation that occur on a design day.

Units and Facilities Demand

The design day demand forms the basis for determining units and facilities demand. Table 4 contains the planning standards used in this study to permit the translation of design day demand into acreage and unit demand or requirements. The planning standards indicate the number of participants in an activity that can be served on a given day. Therefore, the design day demand for the base year and projection years is divided by these standards to relate needs in terms of units and facilities. Facilities planned to meet design day demand represent the optimum practical level of investment.

Demand

This booklet presents the estimates of recreation demand in units and facilities for the state, for the 11 recreation planning regions, and for the localities (counties and urban areas) for the years 1977, 1990, and 2000.

Demand figures reported here have their basis in the 1972 statewide household survey of recreation participation and in the demand calculation procedure discussed in previous sections. The process used here to calculate 1977 base year demand for the state and for the 11 regions is identical to that used in the 1972 study, except that here the 1977 population estimates replaced the 1972 estimates. Locality demand for recreation activities in 1977 was determined by apportioning out the

TABLE 4

calculated regional demand to each region's counties and urban areas on the basis of each locality's percent of regional population.

Demand for the projection years 1990 and 2000 was determined in the 1972 study in the manner discussed in previous sections and published in the Virginia Outdoor Recreation Demand Survey, 1973. Those projections reflect a higher population for the years 1990 and 2000 than is now anticipated by the Virginia Department of Planning and Budget. Given this, the projected demand estimates reported here for 1990 and 2000 have been lowered from the 1972 projections by the percent of change (drop) in expected population.

Tables 5, 6 and 7 present state and regional demand for recreation activities in units or facilities for the years 1977, 1990 and 2000 respectively. Table 8 contains the 1977, 1990 and 2000 demand estimates for all counties and large urban areas in the state listed in alphabetical order. In all of the tables in this booklet, Hunting - Waterfowl Acres includes water and wetland hunting acres; Outdoor Game Fields includes baseball diamonds, softball diamonds, football fields, basketball courts, and volleyball courts.
